

Acute Care - Cardiology Use Cases.

Main Use cases

- Discussion of ward patients
- Discussion of high-risk patients in or out of hospital
- Research/case reports
- Discussion of patients for multidisciplinary meetings (MDMs)
- Dissemination of clinical advice not tied to a specific patient
- Referrals to Cardiology specific AHP

Example A

Pt A presents to A&E 40 yr. old male suspected new heart failure, we review on MAU note pt. needs urgent echo, message our colleagues on Pando who come up to ward to undertake echo whilst we are there,

Patient has severe LVSD, we have instant result of echo, facilitate appropriate medication, and transfer to CCU.

Example B

Pt B seen by echo technicians in department, has been referred by GP for outpatient echo - pt has severe LVSD, we are contacted by echo technicians on Pando and informed of pt.

We are able to attend department see pt. initiate medication and organise review in Heart failure clinic the week after.
